

COMPLETE MODULAR SAUNA KITS FROM SCANDIA

Scandia is committed to making your modular sauna purchase and construction easy. A quality sauna originates from the quality of materials and the sauna heater. Scandia has been the exclusive “preferred vendor” for the YMCA’s nationally for 13 years running. Scandia is also a preferred vendor for Gold’s Gym, Powerhouse Gyms and Bally’s Total Fitness. Scandia only supplies full-length 2”x6” Western Red Cedar. Each kit comes complete and cut to specifications with only the best commercial quality materials and components.

- Select boards of “Grade A and better” Tongue & Groove cedar, kiln-dried, “V” joint, knotty or clear, for interior walls and ceiling.
- Full upper and lower benches made of Grade A clear cedar (screws to be fastened from the bottom)
- Removable Tru-Tile vinyl flooring or optional cedar duckboard for traffic area.
- Solid-core door with insulated window— standard 12”x44” (see Options list for door styles)
- 100% stainless steel sauna heater with steamer tray (240, 208 or 480 volts) with controls. Industry’s best warranty.
- Heater guardrail, hygrometer, bucket/ladle.
- Thermometer, wooden bucket, ladle, sauna light.
- Aluminum foil vapor barrier.

Traditional Finnish Construction: Scandia is one of the few companies that continue to use the time-tested traverse joint system with the modular sauna design. Considered to be the optimum joint design for solid wood saunas, Scandia continues to honor the traditional design approach of log saunas. Solid log saunas are considered the ideal sauna design, log saunas breath naturally and retain/reflect a warmer natural heat when compared to a “wall construction” sauna. Wall construction saunas (pre-cut or wall built modular) use thin cedar boards backed by reflective foil create a more artificial heat environment.

The Heart of The Sauna: Sauna enthusiasts know that pouring water on the sauna heater rocks will increase the sauna’s humidity and temperature quickly. Club owners know that the Finnish tradition of pouring water on the sauna heater rocks cause damage to the heater and shorten the life of the elements. Scandia’s **Ultra Sauna** heaters are the only heaters in the world that offer a solid pan design with **100% stainless steel** construction. The design allows the use of water while protecting the heater components. Unlike other heaters on the market, water does not run onto the elements and effect the electrical components. Also, Scandia’s heaters do not rust and require **less maintenance** than other heaters on the market. Please consult with a representative regarding various heater sizes, including BTU’s and voltage available.
